

# Solar power – reduce bills with cleaner energy.

Less energy consumption, whilst putting more cash in your pocket.

## Benefits of installing Solar during construction.

**Reduced electricity bills:** Start saving on your electricity bill from the day you move into your new home.

**Get the best placement for solar power:** At planning stages, we will ensure the best location for your solar modules particularly in respect to other roof mounted systems; avoiding potential location & space issues that could arise if installed at a later stage.

**Concealed wiring:** Ensure the aesthetic of your home by installing solar panels during construction to achieve a clean installation with all electrical wiring concealed and neatly secured.

**Save on additional costs:** Installing solar power after the construction of your home will require additional charges such as scaffolding & meter upgrade. Installing solar during construction avoids these charges giving you significant savings.

**Trusted Quality:** Supplied & installed by Chromagen; a company with over 50 years in the solar industry and a trusted supplier to many of the largest home builders.

## Potential savings with Solar.

Nominal System Size	Average Daily Generation*	Annual Generation*	Potential Annual Savings* (at 35c/kWh)
2kW	7.2kWh	2,628kWh	\$920
3kW	10.8kWh	3,942kWh	\$1,380
5kW	18.0kWh	6,570kWh	\$2,300
6kW	21.6kWh	7,884kWh	\$2,759
